Bee Here Now

Print this page and get 3 coins or other small objects.

Place coins or buttons on the three cells marked "Start". These tokens represent bees who would very much like to get to the three spots marked "Finish". The problem is that their hive is very slippery. If they start walking any direction, they cannot stop until they run into a heavy dark wall or another bee. How can you get a bee to rest on each of the three finish cells? Note: A bee will not come to rest on a "finish" unless there is another bee or heavy wall blocking their path. The quickest solutions we've found so far are 7 moves for the small puzzle and 23 for the large one. Let us know if you find a way to do it in fewer moves!
